

ShareBase

Summary

ShareBase by Hyland is an enterprise cloud-based file-sharing product, and an ideal extension to your OnBase solution. Allow unlimited sharing of files both inside and outside your organization, while maintaining ownership and control of the entire process at the corporate level. By utilizing the secure, purpose-built Hyland Cloud, ShareBase equips you to share files with confidence, knowing exactly where your information is located and that your data will never be co-mingled with other organizations' data.

Benefits

ShareBase was designed specifically for your enterprise, allowing you to:

- **Retain corporate control of the entire file sync and share process.** Tightly control who uses the product, enforce the use of corporate email addresses for accounts, and establish access rights and permissions at the folder- or individual document-level. Automatically revoke and transfer rights when users leave your organization or change roles, mitigating the risk of unauthorized access and ensuring continuity during transitions of personnel.
- **Share with confidence.** By leveraging the purpose-built OnBase Cloud (rather than a public-shared cloud), you minimize risk and increase security. ShareBase is hosted in data centers strategically positioned around the globe, allowing you to select a region that meets your needs and know exactly where your information is located. An un-editable audit trail equips you to see exactly what content is being shared and accessed and by whom, while native document encryption—with a personal encryption key—ensures your important information is protected.
- **Extend your OnBase solution.** ShareBase interacts with your existing OnBase system, allowing documents to be easily shared outside OnBase, collaborated upon and imported back in. OnBase can automatically capture documents uploaded to ShareBase, and automate secure sharing and notifications within your processes based on business rules. Eliminate reliance on email, FTP sites and USB keys by using ShareBase to confidently share folders and documents with individuals with no access to OnBase.
